Recycling Committee Meeting
September 26, 2019

Present: Leslie Whone, Sheila Morse, Meredith Martin, Joe Carignan, Rick MacMillan, Tom Kennedy, Jane Holmes

We met at the Transfer Station in order to have a clearer idea of potential changes to the layout. The select board is recommending a full overhaul of the transfer station.

Discussed pros and cons of various proposals and reviewed past proposals, since there have been several over the years. Talked about priorities and timelines. We believe the work can be done in phases.

**First priority** – find out from the state experts whether we can build on the site of the current storage building.

**Plan A** -- If we can build on that site, then
- **Step 1** – Build the storage building where the old storage trailers are now
- **Step 2** – Lower the compactor to ground level, move the metal container and the construction debris container to the area where the compactor is now; line up the three containers and build a cover for them
- **Step 3** – Move the office, perhaps to the site of the current metal container

**Plan B** – If we can’t build on the site of the current storage trailers, then
- **Step 1** -- Lower the compactor to ground level, move the metal container and the construction debris container to the area where the compactor is now; line up the three containers and build a cover for them
- **Step 2** – Build the storage building where the metal container is now
- **Step 3** – Move the office, perhaps to near the stop sign at the entrance to the facility

We also discussed a warrant article to access funds from the Transfer Station budget.

Meeting adjourned at 7.15

Next meeting: October 17, 2019 at 6pm in the Library

Respectfully submitted,

Jane Holmes
